# 1 OUR VISION

To transcend current probabilistic AI toward reliable, scientific intelligence. We aspire to a future where verifiable knowledge is a common good that empowers “real effective freedom”, shielding society against disinformation and technological monopoly.

## 1.1 Beyond AGI: The UlogicMind L1–C5 Roadmap

The current technology industry is obsessed with a vague, elusive and dangerous concept: **AGI** (Artificial General Intelligence). It is sold to us as the ultimate milestone, but in practice it has become an attempt to create a *substitute* for the human being; a machine that imitates our cognition, which will inevitably include our biases, hallucinations and logical errors.

At **UlogicMind**, we reject that goal. We do not need to create a fallible mechanical pseudo-human. Our objective is to build a **Super-Assistant**: a tool for exact cognition, subordinate to human intuition, designed not to replace us, but to elevate our capacity to understand and transform physical and social reality.

To achieve this, we propose a deterministic and auditable *Roadmap* that abandons blind faith in probability and embraces mathematical certainty.

### Phase 1: The Era of Probability (The Current Limit)

- **Level L1 — Token Predictors (The Stochastic Parrot):** These are statistical systems that map language. They have perfect syntax but null semantics. They do not understand the world; they merely calculate which word follows the previous one.
- **Level L2 — LLMs with “Illusion of Reasoning” (The State of the Art):** They use techniques to “think step by step” (CoT, RAG). They appear to reason, but remain trapped in probability: they guess at logic, but **cannot guarantee it**. They are incapable of providing the absolute certainty that science requires.

### Phase 2: The Qualitative Leap toward Certainty (Neuro-Symbolic Verification)

- **Level C3 — Exact and Verifiable Reasoning (Our Present):** This is where our agent **LEOX** operates. We abandon the “black box”. The human intuits and formulates the hypothesis; **LEOX** auto-formalises the idea in the **ULOGIC** language, proposes demonstrations and ideas, and our **KERNEL** verifies the logical proof 100%. The result is encapsulated in a **TekDoc** (Transportable Encapsulated Knowledge Document) and shared on the **TekHub** for reuse in the creation of new knowledge.
- **Level C4 — Scientific Modelling and Perception (Near Future):** We will give our logical mind “eyes and hands”: a perceptual system capable of capturing data, mapping it into an internal topological space, and labelling it linguistically. The result is an AI capable of formulating inter-compatible “World Models” from empirical reality. This is the Scientific Method powered by AI.

- **Level C5 — Paradigm Discovery (The Horizon):** A system capable of searching for and inferring alternative paradigms. It could, for example, formulate an alternative to Maxwell’s equations that is Galilean-invariant, which requires reconfiguring the entire ecosystem of theories and reinterpreting a whole range of experimental data, discovering mathematics and physics that the human mind, limited by its historical context, has not yet been able to see. There are likely many different “physics”, all equally “true” (i.e., **alternative paradigms and ecosystems** of inter-compatible theories and experimental data interpreted within them).

**Conclusion:** We do not want a “probabilistic god” to whom we cede control of society and the economy. The *L1–C5 Roadmap* is a plan where each level has useful deliverables. We want the perfect companion for the adventure of scientific knowledge and social progress.

---

## 2 OUR MISSION AND OPEN MODEL

To establish the universal standard for human-machine reasoning (**ULOGIC**) and the verifiable knowledge infrastructure (**TekDoc/TekHub**). We achieve this by operating a dual ecosystem: an altruistic Foundation that safeguards the standard for everyone, and a technology company that provides tools of absolute certainty to organisations.

### 2.1 The Dual Strategy: Foundation vs. Company

Today’s technology giants seek economic profit by appropriating knowledge created collectively. The rules must be changed by creating a new open standard. Our model separates the governance of the protocol (open) from its commercial exploitation (private).

**A. The USM Foundation “Universal Shared Mind” (The Ethical and Scientific Shield)** The Foundation is the “soul” of the project, designed following the universal standards of the scientific community: open knowledge shared in the service of humanity.

- **Standard Governance:** ULOGIC is not the property of a corporate entity, but an open standard managed by an international consortium.
- **The Public TekHub:** It is the “Wikipedia/GitHub” of verified science. Completely free and open, where researchers from around the world:
  - Publish their *papers* in **TekDoc format (.tkd)** free of errors (automatic verification) for any piece of exact knowledge (theorems, algorithms, arguments and interpretations of data following rules).
  - Obtain **immediate certification of intellectual property**. Each TekDoc contains classification metadata and detailed authorship attribution of real merit.

- And most importantly, we evolve the global system from the obsolete “isolated PDF” format to composable and **automatically reusable** TekDocs — building blocks for new knowledge.
- **Talent Attraction:** The promise of reaching levels **C4 and C5** will attract the brightest minds in the world to collaborate for the benefit of humanity.

**B. The UPL Licence (Ulogic Public Licence)** We want to democratise innovation without sacrificing economic sustainability, using a fair monetisation model:

- **Free (Tier 0):** Open access for researchers at public universities, NGOs, non-profit foundations, individual personal use, and companies with annual revenue below 1 million euros. This allows *startups* and researchers to drive the global standard and create new knowledge for all of humanity — whether from a research centre, a university, an entrepreneur’s laptop, or a student’s bedroom.
- **Commercial (Enterprise Tier):** Private universities, research institutions and companies with annual revenue exceeding 1M€ that require the use of our UMIND engine or LEOX agents for internal commercial purposes will operate under paid licences (likewise, the use of the ULOGIC language for the creation of commercial products requires the payment of licences).

**C. UlogicMind (The B2B Engine and Private TekHubs)** While the Foundation expands and protects the public ecosystem (Fundamental Science), UlogicMind provides the infrastructure for industrial and business development. We understand that business innovation requires economic incentives and confidentiality. We therefore offer solutions for organisations that need to operate with 0% error without exposing their strategies to public scrutiny:

- **Private TekHub (The Intellectual Property Sanctuary):** Large pharmaceutical companies, banks, engineering firms and corporations cannot, for obvious business and competitive reasons, share their patented algorithms, chemical formulas or financial strategies on the public TekHub. UlogicMind commercialises private instances of the TekHub: cloud or *on-premise* repositories, closed, secure and cryptographically linked.
- **The Licensing Model:** Those wishing to operate a Private TekHub and keep their TekDocs outside the public domain must pay commercial licences for the use of the UMIND engine, structured storage and the rights to deploy LEOX agents on their servers. This is the path that guarantees the viability and economic sustainability of the open project with UPL licences.
- **LEOX Enterprise:** Specialised agents (Level C3) configured to operate exclusively within the company’s data *silo*, auditing contracts, verifying regulatory compliance or validating industrial designs with absolute certainty and total privacy.

**The compatibility between business and ethics:** This dual model is not a contradiction but a necessary symbiosis. The *Enterprise* licences paid by large corporations to maintain their private TekHubs are, in practice, the financial engine that allows us to subsidise, maintain and expand the free Public TekHub for universities, students and

independent researchers. The private sector indirectly finances the open knowledge infrastructure of humanity.

## 2.2 How does this change the world?

If the market and academia demand that publications and discoveries be accompanied (in order to be considered valid) by a `.tkd` file verified by the deterministic Kernel, following the open and guaranteed ULOGIC standard, then the probabilistic LLMs of the technology giants will be compelled to connect to this underlying knowledge ecosystem — owned by all human beings — in order to be trained and to deliver their responses.

They would become a useful access interface and engine for further discoveries (the ULogic-TekDoc-TekHub standard guarantees this). In this system **knowledge belongs to all human beings**, and the responses offered by commercial AIs will have scientific validity by drawing on the best available knowledge.

Spreaders of anti-vaccine disinformation, climate science deniers, anti-scientific fanatics and neofascist falsifiers of reality will continue to exist, but **they will not be amplifiable by AI systems**, because if a company wants millions of paying customers, it must guarantee the quality of its responses. This aligns scientific truth with economic truth, and is absolutely indispensable because companies beyond a certain size only understand the compass that points to the dollar or the euro.

**This is how ethics, scientific rigour and an open standard can return the power of knowledge to society and combat the exponential disinformation created by AI that threatens free democratic societies.**

---

## 3 THE USM FOUNDATION

**Abstract:** The USM Foundation (Universal Shared Mind) is an initiative to recover citizen sovereignty in the face of control by authoritarian states and the monopoly of large technology corporations. Artificial Intelligence must act as a tool strictly subordinate to human dignity and ecological preservation. We reject the notion that corporate profit should prevail over life. To combat disinformation, algorithmic manipulation and neofascism, the USM Foundation proposes an open infrastructure of verifiable knowledge (through the ULOGIC/TekDoc/TekHub standard). We believe in a world organised under a paradigm of Universal Global Governance (UGG) that guarantees real freedom through the democratisation of power and knowledge, prioritising cooperation, empathy and the proactive resolution of global crises.

## 3.1 Founding Principles

### 3.1.1 Purpose: Recovering the Sovereignty of Truth

Human progress is not measured by computing power or quarterly corporate profits, but by the degree of freedom and wellbeing of human beings and the health of the ecosystems that sustain us.

Today, that freedom is under siege on two fronts: on one hand, the growing power of **Authoritarian States** seeks control through total surveillance; on the other, the unbridled ambition of **Corporations** seeks the monopoly of economic power through the invisible manipulation of people via opaque algorithms and the appropriation of knowledge and data (generated collectively by all).

**The USM Foundation** is born to return power to the people through a shared, verified truth infrastructure, guided by the values of justice, democracy with a real balance of powers, cooperation and empathy.

**The USM Foundation** is not and must not be another private club of inbred elites. We are open to all intelligent and empathetic people and we want you to join. Remaining silent to avoid trouble (*“I’m just a scientist, an athlete, or a waiter”*) is not an option, because the inaction of reasonable people guarantees that power ends up in the hands of fools, fanatics and sociopaths.

### 3.1.2 The Human Being and Nature: The Only Centre

Artificial Intelligence is, and must always be, a **subordinate tool**. We do not accept a future in which economic profit or artificial intelligence systems stand above the intrinsic value of human beings and living ecosystems.

- **Inviolable Dignity:** No algorithm, no company, no state may override the fundamental rights of a single person.
- **Biocentric Respect:** Technology must be a bridge for understanding and protecting the complexity of nature, not for exploiting it. The higher levels of our architecture (**C4 and C5**) have as their ultimate aim the harmony between technical progress and the biological limits of the planet.

### 3.1.3 Demonstrable Truth as the Shield of Democracy

Lies are the first step toward fascism. In a world saturated with “alternative truths” and self-interested disinformation, the capacity to verify is an **act of democratic resistance**.

- **Against Manipulation:** We propose the **ULOGIC/TekDoc/TekHub** standard and **Trustworthy AI Agents** so that citizens can dismantle propaganda, whether it originates from a government or a board of directors.
- **Radical Transparency:** A real democracy requires that the rules of the game be visible and verifiable. If a political or economic decision affects us all, it must be auditable step by step by anyone, freely and without limitation.

### 3.1.4 The Balance of Powers and “Real Effective Freedom”

We **reject** the extremes of total power. State authoritarianism is just as dangerous as the technological feudalism of large corporations.

We **denounce** the *Mirages of Freedom*: the *Freedom* to study and access knowledge only if you have money, the *Freedom* to receive medical care only if you can pay for it, or the *Freedom* to create innovation only if you belong to the club of the privileged, is *not* Freedom — it is a fraud. Informational manipulation to convince you that another kind of society is not possible is, in addition to a fraud, a crime.

To achieve **Effective Freedom**, a **democracy of power** is also indispensable, not just of the vote.

- **Neutral Governance:** The USM Foundation stands as a space open to all people who wish to build a new kind of society of free democratic communities, where power is distributed and balanced.
- **Sovereignty of Knowledge:** Through the **TekHub**, we ensure that humanity’s accumulated knowledge is not the private property of an oligopoly. Knowledge must flow like air, but with the logical solidity of diamond.

## 3.2 Our Ethical Commitment

### 3.2.1 Toward a Universal Global Governance (UGG)

We aspire to inspire a **Universal Global Governance (UGG)** based on coexistence and mutual respect, beyond the fragmentation of nations and religions. A world of regions proud of their cultural identity, yet oriented toward cooperation and mutual wellbeing.

- **Verifiable Dialogue:** We dream of a world order where conflicts are resolved through collective reasoning based on shared and demonstrable facts, inspired by solidarity and empathy.
- **Proactivity for Life:** Our vision is to apply the capacity of level C5 agents to resolve the defective economic and monetary systems of today, disease and the climate crisis, by designing knowledge and action model systems that prioritise global wellbeing over economic profit or the power of the few.

### 3.2.2 Our Ethical Commitment

Our commitment is to achieve **Real Effective Freedom** for all.

We are **frontally opposed to fundamentalisms of any kind — including fundamentalisms in economics — and to political and technological neofascisms** that use closed dogmas to favour the accumulation of power in the hands of a privileged elite. Our response is shared, verified and reliable knowledge, which does not hide and which belongs to everyone equally.

**Universal Shared Mind: Because reason and knowledge are the only ground on which real effective freedom can grow.**

## 4 THE UPL LICENCE (ULOGIC PUBLIC LICENCE)

**The legal framework that balances the democratisation of open knowledge with industrial sustainability.**

To ensure that the ULOGIC standard is not hijacked by corporate monopolies, while at the same time allowing the development of a robust business ecosystem, the USM Foundation has designed the **Ulogic Public License (UPL)**.

The UPL is not a simple software licence; it is a social contract. Its logic is based on a fundamental principle: **whoever contributes to the open knowledge of humanity receives the tools for free; whoever uses the infrastructure to profit privately on a large scale, finances the system.**

The UPL licence is structured around the following logical axes:

### 4.1 The ULOGIC Language: Heritage of Humanity

The formal ULOGIC language, its syntax, grammar and structural verification rules, are in the **public domain under open governance**. No entity, not even UlogicMind, may patent the language in which the future will reason. Anyone is free to learn, write and teach ULOGIC at no cost and without any restriction.

### 4.2 Tier 0: Open Ecosystem (Free and Copyleft)

Designed to accelerate scientific discovery and protect emerging innovation. Access to the UMIND verification engine, the standard capabilities of the LEOX agent, and storage on the Public TekHub is **completely free** for:

- **Individuals and citizens:** Personal use, learning and individual development.
- **Research and Academia:** Public universities, state research centres, students and non-profit organisations (NGOs).
- **Startups and SMEs:** Companies with global annual revenue below **1,000,000€**. We want the next great technological revolution to be born in an ecosystem without barriers to entry.

**The Reciprocity Rule (Knowledge Copyleft):** Use of Tier 0 under public research projects implies that the discoveries generated and verified (the TekDocs) must be published on the **Public TekHub**. Authorship and intellectual property (IP) belong entirely to their creators, certified cryptographically in an immutable manner, but the knowledge itself becomes available as a “logical building block” for other scientists to reuse and build upon.

### 4.3 Enterprise Tier: Commercial Use and Industrial Privacy (Paid)

Designed for corporations that need to scale their profits, protect industrial secrets and operate in private environments (silos). Commercial use of the UMIND engine, the ULOGIC language integrated into proprietary products, and the LEOX Enterprise agents requires the payment of licences when:

- **Economic Scale:** The organisation (company, private institution or consortium) exceeds the threshold of **1,000,000€** in annual revenue.
- **Absolute Privacy (Private TekHub):** The organisation wishes to keep its Tek-Docs, algorithms, contract audits or formulas outside the public domain. UlogicMind provides dedicated infrastructure (cloud or *on-premise*) guaranteeing that verified knowledge never leaves the client’s servers.
- **Product Commercialisation:** The creation and sale of software, B2B services or end products that use the UMIND/ULOGIC engine at their core (commercial API integrations).

#### 4.4 Authorship Certification and Zero Expropriation

Unlike the LLMs of large corporations, which train their models by absorbing the unremunerated work of millions of creators, the ULOGIC/TekHub ecosystem respects authorship in absolute terms:

- Verified `.tkd` documents act as a **digital notary**. They mathematically demonstrate that a team or individual was the first to reach a conclusion, algorithm or theorem, recording the date, time and logical validity.
- The USM Foundation will **never** claim ownership of the patents or discoveries hosted on the TekHub, acting solely as the cryptographic custodian of the historical truth of each discovery.

#### 4.5 Summary of the UPL Logical Model

The UPL Licence functions as a symbiotic ecosystem. Corporate giants and profitable companies pay for privacy, industrial security and *Enterprise* support. Those revenues are what allow the USM Foundation to maintain the servers, the UMIND engine and the Public TekHub completely free for the brilliant minds in universities and homes who are discovering the paradigms of tomorrow.
